- Plan is not transferrable and no substitutions are permitted.
- If you have any questions, please ask our friendly staff!

Preventive medicine helps to keep your dog healthier, prevent disease, and detect illness earlier for best treatment.

Wellness Plans assist you in helping your pet live a healthy life while you financially manage the costs associated with their care. Senior dogs over the age of 8 have an increased risk of disease.

Our Exam and Consultations include a thorough nose to tail examination and time for discussion with the veterinarian.

Vaccinations protect against harmful, and even fatal, infectious diseases. Vaccines are based on the lifestyle of your dog and our plans cover the most common vaccines. Other vaccinations may be required that are not included in the plan.

Fecal tests check for the presence of internal parasites including roundworms, hookworms, tapeworms, whipworms, and Giardia.

Blood and urine tests are essential tools for identifying diseases as early as possible, when they are most treatable. Your dog could appear healthy but still have underlying health problems.

Monthly prevention products help protect your dog from major complications including, but not limited to: flea infestations, Lyme disease, Heartworm, and intestinal parasite infections.

You can also choose to incorporate routine dental care as part of your Wellness Plan. Dental care for dogs is important to their overall health. Please see our Oral Health Care Plan.
